

Dissertation Sur Les Vins

By Jr. James R Florance Jose A Rivera

RareBooksClub. Paperback. Book Condition: New. Paperback. 80 pages. OCLC Number: 51776794 Excerpt: . . . EXPERIMENTAL APPARATUS The pertinent flow properties (i. e. Mach number, dynamic pressure, etc.) are calculated from four measured tunnel parameters: 1) total pressure, 2) static pressure, 3) total temperature, and 4) R-134a purity. The total pressure is measured in the settling chamber of the TDT by a total pressure probe mounted two feet away from the west wall of the settling chamber at a position slightly below the vertical centerline of the settling chamber. The primary static pressure measurement is made via a tube located between the west wall of the plenum exterior shell and the control room (see figure 2 (a)), at a height near the centerline of the test section. This is a reasonable location under the assumption that the test medium in the plenum is relatively still and at nominally uniform pressure except in the immediate vicinity of the sidewall slots in the test section. Both total and static (plenum) pressures are measured with Ruska Series 6000 digital pressure gages, which have a fused-quartz bourdon tube transducer with a digital...

Reviews

A top quality publication along with the font used was intriguing to read. I really could comprehend everything using this written e book. Its been designed in an remarkably straightforward way and it is only after i finished reading through this publication by which basically altered me, modify the way i believe.

-- **Cathrine Larkin Sr.**

Very useful to all of group of people. I actually have read through and so i am certain that i will planning to study yet again once again down the road. I am just very easily can get a satisfaction of looking at a created book.
