

Learning from Nature How to Design New Implantable Biomaterials From Biomineralization Fundamentals to Biomimetic Materials and Processing Routes . 13-24 October 2003 Nato Science Series II

By -

Springer. Hardcover. Book Condition: New. Hardcover. 234 pages. Dimensions: 9.5in. x 6.3in. x 0.7in. The development of materials for any replacement or regeneration application should be based on the thorough understanding of the structure to be substituted. This is true in many fields, but particularly exigent in substitution and regeneration medicine. The demands upon the material properties largely depend on the site of application and the function it has to restore. Ideally, a replacement material should mimic the living tissue from a mechanical, chemical, biological and functional point of view. Of course this is much easier to write down than to implement in clinical practice. Mineralized tissues such as bones, tooth and shells have attracted, in the last few years, considerable interest as natural anisotropic composite structures with adequate mechanical properties. In fact, Nature is and will continue to be the best materials scientist ever. Who better than nature can design complex structures and control the intricate phenomena (processing routes) that lead to the final shape and structure (from the macro to the nano level) of living creatures Who can combine biological and physico-chemical mechanisms in such a way that can build ideal structure-properties relationships Who, else than Nature, can

Reviews

These kinds of publication is the ideal pdf offered. It generally is not going to expense too much. I am just delighted to let you know that this is actually the very best book i have go through inside my very own life and might be he finest ebook for ever.

-- **Mabelle Schoen**

Great e book and beneficial one. It is amongst the most awesome pdf i actually have read through. You wont feel monotony at at any time of your own time (that's what catalogs are for relating to if you request me).
