# CHARACTERIZATION OF MONO- AND BIMETALLIC NANOPARTICLES SYNTHESIZED VIA MICROEMULSIONS

Shaker Verlag Feb 2014, 2014. Buch. Book Condition: Neu. Neuware - Research in the field of heterogeneous catalysis often focuses on the search for highly active and cheap catalysts in order to find possible substitutes for expensive but efficient base materials such as platinum. In this thesis mono- and bimetallic platinum-based nanoparticles (NPs) were synthesized via water-in-oil microemulsion. The resulting Pt, PtBi and PtPb nanoparticles were then characterized. 172 pp. Englisch.

## Reviews

---

*It in a single of the best publication. Sure, it is play, continue to an interesting and amazing literature. You will not really feel monotony at whenever you want of your time (that's what catalogues are for about in the event you question me).*

-- **Sonia Block I**

*This is the greatest pdf i actually have go through right up until now. It is actually packed with knowledge and wisdom I found out this book from my dad and i advised this publication to find out.*

-- **Arely Rath**

*I actually started reading this pdf. It can be rally exciting throug reading period of time. Your lifestyle span is going to be enhance as soon as you total reading this ebook.*
